Notes:

1. Fulfillment Ratios are calculated up to the respective policy anniversary in the reporting year.

$$\text{Fulfillment ratio of extra bonuses / annual dividends} = \frac{\text{aggregate of actual accumulated extra bonuses / annual dividends and interests}}{\text{aggregate of corresponding illustrated amounts at the point of sale for all relevant in-force policies}}$$

$$\text{Fulfillment ratio of terminal bonus} = \frac{\text{aggregate payout of terminal bonus}}{\text{aggregate of illustrated amounts at the point of sale for all relevant policies}}$$

2. The calculation of fulfillment ratios of extra bonuses / annual dividends is based on the assumption that all extra bonuses / annual dividends (if any) declared are left with the Company for interest accumulation since policy issuance.
3. Some fulfillment ratios may not be applicable due to the following reason(s):
 - a) No relevant policy is in-force with the respective policy year as of the end of the reporting year;
 - b) The amount of accumulated extra bonuses / annual dividends and interest / terminal bonus illustrated at the point of sale for the respective policy year is zero;
 - c) No terminal bonus was paid in reporting year as no policy was terminated in the respective policy year.
4. The historical fulfillment ratios of extra bonus / annual dividend / terminal bonus are for reference purposes. They are not indicators of future performance of the products.
5. For the terms and conditions of extra bonus / annual dividend / terminal bonus, please refer to the policy provisions of the product.
